

Total Tank Protection – Inside and Out

Your single source for tank pressure and flame management solutions

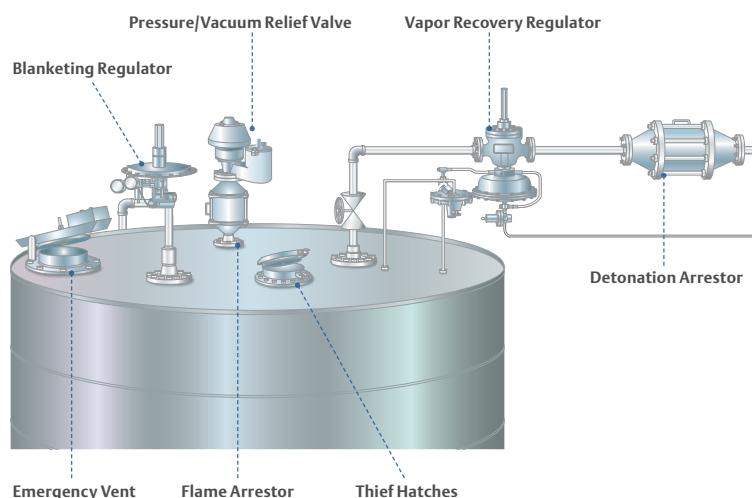

Emerson tank protection solutions have expanded to include high performance pressure vacuum relief valves, flame arrestors and more. It's the latest step in our ability to provide the widest array of environmental protection and safety equipment, expertise and unparalleled service across a full range of oil and gas, chemical and other industries worldwide.

Achieve enhanced safety for your employees, assets and products around the globe with more solutions from Emerson, your single-source for total tank protection.

SAFETY. The most important thing is to protect personnel and assets. It requires expertise in managing pressure control systems to ensure proper tank pressure management.

EMISSIONS CONTROL. Companies and governments around the world are focused on the positive environmental benefits of reducing emissions, thereby increasing industry requirements. Highly accurate and sensitive tank pressure management design is vital in these efforts.

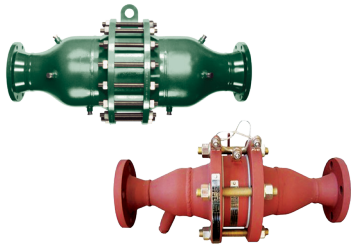

PRODUCT INTEGRITY. Valuable tank assets must be protected against moisture, contamination and product loss. Dependable tank pressure control systems help reduce the operation costs by maintaining product levels, reducing blanketing costs while preserving product quality.

Total tank protection from a single source

Our tank protection offering now includes Anderson Greenwood™, Amal™ and Varec™ technologies in addition to our existing Fisher™ and Enardo™ solutions.

Flame and Detonation Arrestors

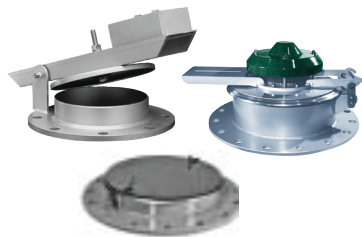

- Protect against propagation of deflagrations and detonations
- ATEX (ISO 16852) and USCG (US Coast Guard) approved models

Pressure Vacuum Relief Valves

- Minimize harmful emissions and evaporative losses
- Protect against excessive positive or negative pressure
- Tested in accordance with API 2000

Emergency Vents

- Provide venting capacity for storage tank emergencies when normal venting capacity is not adequate

Hatches

- Lock-down hatches provide access for sampling and gauging
- Protect against excessive positive or negative pressure with spring-loaded hatches

Tank Blanketing Regulators

- Regulate the flow of blanketing gas used to neutralize oxygen in tank
- Low setpoints minimize cost of blanketing gas

Wireless Monitoring

- Allows monitoring of selected devices from safety of control room – and immediate response to safety and emissions events
